

InspectionWorks Insight

Maximize the power of your data

Propel your inspections into the future.

Industrial technology is rapidly advancing. Infrastructure is growing, new complex assets are regularly being introduced, and more inspection data is being generated than ever before. But without suitable organization, the power of that data cannot be properly utilized.

Waygate Technologies InspectionWorks Insight allows you to effortlessly store, share, search, and manage your inspection data securely in the cloud—delivering the visibility you need to make the most informed operational decisions possible.

On the Mentor Visual iQ VideoProbe, InspectionWorks Insight can also be paired with Menu Directed Inspection (MDI) software. MDI allows you to automatically tag, label, annotate, and report on inspection data—eliminating time-consuming manual processes, as well as human error. Used together, MDI and InspectionWorks Insight provides the most efficient post-inspection data analysis and report generation.

Greater access drives better decisions.

The greater the access to data, the better the outcomes. InspectionWorks Insight, a key component of our IW ecosystem, is the only data management solution of its kind. It organizes results from multiple sources to create a comprehensive asset model and complete inspection history in the cloud. With InspectionWorks, you connect and curate all inspection data in one central software platform, enabling a transition from asset health optimization to fleet health optimization.

Better decisions

Quickly gain insights into operations to implement APM and improve fleet performance. Enhanced data quality and consistency elevates overall visibility, and increased sharing capabilities drive collaboration for faster decision-making.

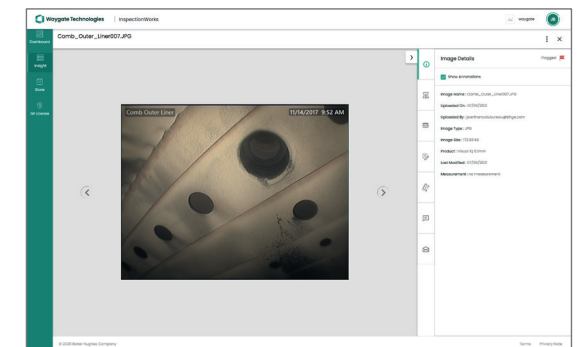

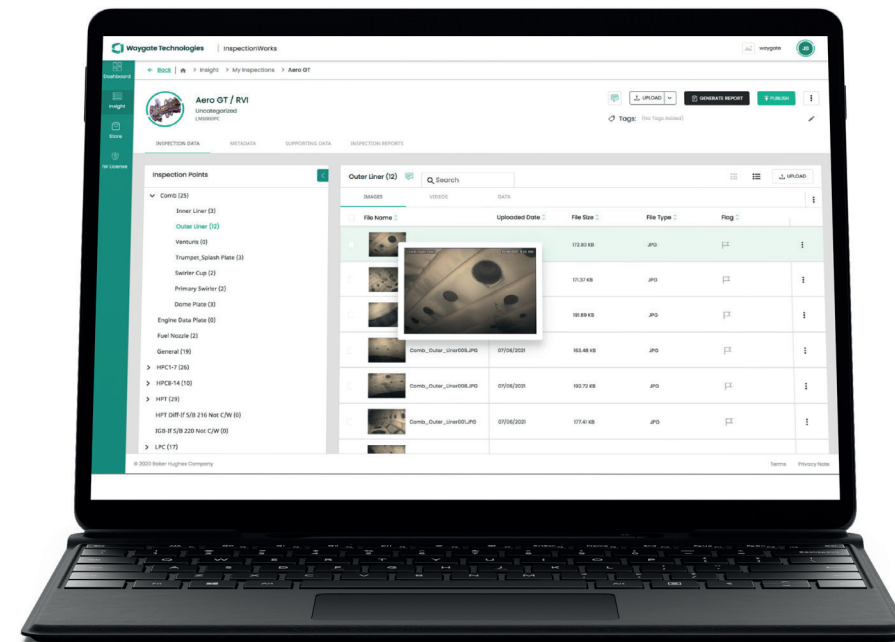

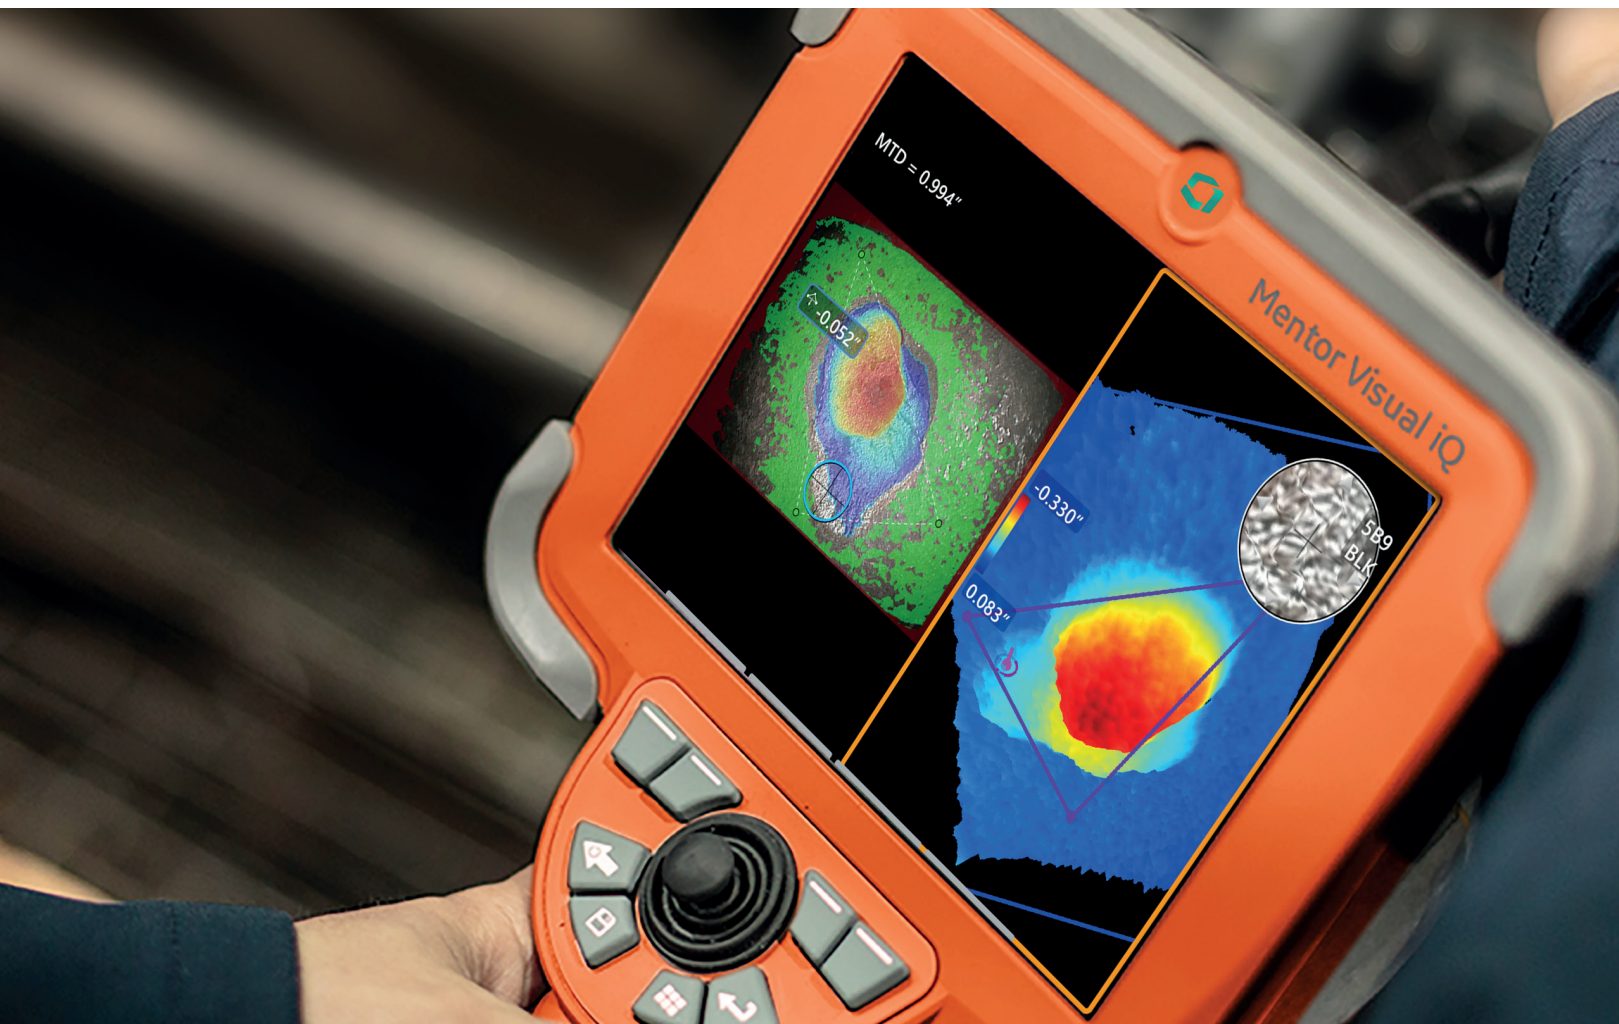

Increased efficiency

Standardization of inspection processes related to generation and ingestion of data saves time and reduces the overall cost of inspection. Increased data mobility also lowers process time.

Trusted security

InspectionWorks Insight is always on par with the latest cyber security standards. Data is encrypted both at rest, and during transit. With each software release, Waygate Technologies runs both static and dynamic tests to ensure security protocols are up-to-date and effective. And with Representational State Transfer (REST) APIs, you get the flexibility, security, and scalability you need to ensure data integrity.

View various inspection cards and individual images, add comments, tag, and share with other users for easier, better decision-making.

Forward-thinking, legacy-driven.

As the world's leader in digital industrial inspection technology, Waygate Technologies is constantly working to optimize and advance inspection processes. InspectionWorks Insight, and the entire InspectionWorks portfolio, is designed to deliver the best possible solutions for a safer, more reliable future.

Waygate Technologies, formerly GE Inspection Technologies, is a global leader in NDT solutions with more than 125 years of experience in ensuring quality, safety and productivity.
